

Experience

- Front-end Website development for KelajakMerosi <https://kelajakmerosi.uz/> - Popular course center at my city with over 1000 students, I worked with a team to make a website for them, purpose of the website is to take exams from their students and also offering paid Mock exams for global audience, such as IELTS, CEFR, SAT and Uzbekistan specific certification exams. I created the front-end section of the website using nodejs, expressJS, HTML5 and CSS3. The Website is secure and API endpoints are not exposed. *Team leader decided to give the client unfinished work so I quit working with them.*
- App advertisement website and Admin Panel for Bir Zum <https://bir-zum.uz/> - Popular wedding restaurant in our region, (people book it 4 months in advance). I created single page website to showcase apps features and give tips on how to use it. Website is fully responsive, secure and optimized. I also made the Admin panel's front-end section. Secured it with custom middleware to ensure proper security measures. The panel uses phone number SMS verification in order to log in, used to create categories, subcategories, control content posted by users such as accept and deny posts, force delete them, also used to manage displayed ads on the Mobile App. Written in NodeJS, ExpressJS, HTML5, CSS3.

Projects

- Currently in development – eCommerce app with: User system that uses phone number verification, product listing system, categories and subcategories for easy navigation, Search and filter functions for easy lookup of items, comments for products, cart and product rating system [rating is only allowed for those who purchased it, as my main target buyers are medium sized businesses that avoid using online payments, I made it so purchases are done outside the website and the owner can manually add if a user purchases an item] Admin panel to manage items, section and subsections, banners, moderate users and such.
- Currently in development – custom telegram OTP bot that is very easy to migrate into existing or new infrastructure, saves money by not having to pay SIM providers.

Education

- Presidential school in Nukus, dropped out by choice, wasn't specialized for my career
- School N-1 in Turtkul, Class specialized in English and Mathematics

Skills

- NodeJS - Advanced
- ExpressJS - Advanced
- HTML5 - Expert
- CSS3 – Expert
- git – Intermediate
- MongoDB - Advanced
- Redis - Beginner
- Python - Intermediate
- php – Beginner

Achievements and Certifications

- 2nd place in ICT olympiad across all schools in Karakalpakistan – 2023
- 3rd place in English language olympiad across all Schools in Karakalpakistan – 2023
- CEFR C1 Certification – 2025
- Finished with All (A)s [all subjects]

Notes

- Technical and non-technical communication skills, ability to work independently and as a team, can work under pressure, proactive in code reviews, fast learner – can adapt to new frameworks and technologies, clean, maintainable and scalable code, patient and calm.
